DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dimitrova, US 6,363,380.

Dimitrova discloses a multimedia computer system with story segmentation capability and operating program including finite automaton video parser. Dimitrova teaches a video segmentation device particularly including a time extraction circuitry 108, a classification device 114, and classification storage device 116. See Fig. 1. Regarding claim 1, Dimitrova teaches grouping times within an example communication together as equivalence classes (First, Dimitrova teaches processing each media class separately, as shown in Fig. 2, by which each respective classes are grouped together. Second, Dimitrova's teachings in steps 30-36 in Fig. 6A may read on the grouping step. By performing the steps 30-36, and jumping back to step 10 to repeat the same process, the FA models are collected and thereby grouped. See Fig. 6A, and col. 10, lines 20-29); and using the equivalence classes as states of the finite automation (See steps 32 and 34 of Fig. 6A, the results up to the steps 30 and 43 are used for determining finite automaton).

What Dimitrova fails to specifically teach is an example communication including PDU types. However, Dimitrova teaches multimedia communication including different types of communication signals, such as video signal, audio signal, and text information. See Abstract. Dimitrova further teaches the communication being in frames (e.g., video frame). In this case frame may be a PDU since frame may be the unit of communication. From the teachings, it would have been obvious for one of ordinary skill in the art at the time of the invention to specifically include the type information in the example communication, such as video, audio, and text, to specifically provide the data type.

Allowable Subject Matter

3. Claims 7-16 are allowed.
4. Claims 2-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Art Unit: 2663

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
